7-Zip is a file archiver with a high compression ratio. It supports the most popular compression formats and enables you to extract archives from their own files. 7-Zip SFX-Creator is a small-sized and portable piece of software that enables you to build self-extracting installer and archive files in just a few steps. It does not come packed with an extensive set of options and configuration parameters, so it can be used even by those with less knowledge of such tools. Portability advantages As there is no setup pack involved, you can save the program files to any part of the hard disk and just click the executable to launch 7z SFX-Creator. Another possibility is to save it to a USB flash disk or similar storage unit, in order to run it on any PC with minimum effort and no previous installers. An important factor worth taken into consideration is that the tool does not modify Windows registry settings or create extra files on the disk without your permission, thus leaving no traces behind after its removal. Simple interface with straightforward options The GUI is user-friendly, represented by a small window with a plain appearance that's easy to navigate. You can point out a source file via the file browser only, since the drag-and-drop method is not supported. Once the output directory is established, you can specify the compression mode and file type (self-extracting installer or archive), and click a button to immediately create the new file. Advanced users have the possibility to input command lines and, thus enhance 7z SFX-Creator's functionality. Evaluation and conclusion We have not come across any issues in our tests, since the program did not hang, crash or pop up error messages. It has a good response time and minimal impact on computer performance, running on low CPU and RAM. Although it is not particularly rich in its feature set, 7z SFX-Creator offers a simple solution to building self-extracting installers and archives, and it can be used by anyone. Q: What is "Contract Broker" in MS Dynamics AX 2012? I am struggling to understand the exact role of a Contract Broker in MS Dynamics AX 2012. From what I gather, it is essentially the guy who arranges the contract for you and it is more of a human factor than a software factor. Is my understanding correct? What I am trying to clarify is that is it the same as the

Q: Why would you use the L() function? I am just curious as to the usage of the L() function in R. I can understand its purpose, but why would you use it? What is it's greatest feature? For example, would you use the L() function to convert a string to a factor? Or would you just use levels()? A: This is usually used to convert from a character to a factor. It doesn't make sense to use it to convert from a factor to a character. R> y
