WazTree III is a robust multi-purpose tool for your computer that includes many features not found in any other file manager. A single drive path view is available, and traditional view with all drives in path view are also available. A very small overhead occurs with multiple volumes, and WazTree3 automatically selects the appropriate window for any drives your system works with. If multiple volumes are connected to your computer, and one is not mounted, WazTree3 will first show the window for the non-mounted volume.
