
URL Monitoring Tool Full Version Free 2022 [New]

URL Monitoring Tool Free Download

URL Monitoring Tool is a lightweight cross-platform utility built specifically for helping you check if your server is offline. You can monitor multiple URLs in the same time and receive sound notifications each time the website appears to be offline. It sports a clean and intuitive interface that allows users to insert URLs in the dedicated dialogs and view if they are offline by performing tests. It is possible to edit or delete the selected URLs, or clear the entire list. Furthermore, URL Monitoring Tool is able to monitor all the URLs in the list automatically, and you are required to specify the time limit for this task (in minutes). Additionally, you can make the program display popup warning messages when it detects errors or play sound notifications if the server is not responding. You can upload an audio file, provided that the file format is WAV. With a double-click on the selected URL, you can view additional details about the servers' connectivity issues, namely HTTP, SSH, MySQL, POP3, Telnet, and others. The application also keeps a log with details about the monitoring process and possible errors, which can be exported to a file. During our testing we have noticed that the program carries out a task quickly and without errors throughout the entire process. To sum things up, URL Monitoring Tool offers an intuitive working environment and useful features for helping you monitor URLs with minimum effort. The program remains light on the system resources and is suitable for beginners and professionals alike. URL Monitoring Tool Features: Lightweight URL Monitoring Tool is light on your system resources and consumes less than 1 MB of RAM on the average server. Intuitive URL Monitoring Tool is user-friendly and requires no prior knowledge to use it. Simple and Easy to Use URL Monitoring Tool is a simple utility to check the status of a single URL or multiple ones. It allows you to perform several tests, such as viewing live and cached versions of a site, as well as checking if the site is available online. Timed Task As the name suggests, URL Monitoring Tool supports a timed task that lets you set a time limit for monitoring your URLs. So, for example, you can set this parameter to 30 minutes. Intelligent Monitoring URL Monitoring Tool monitors your URLs automatically, thus you don't have to do it manually. The program will monitor all the URLs you specify, although you are required to specify them one by one. Also, the program carries out the task quickly without hiccups and errors
