%1 - name of the malware, or the path to a generic signature (if set to "generic", checks whether the hashes of all the processes are matching the clean hashes) %2 - the number of threads to use (default 16) %3 - use the clean hash database to start (default is to start from scratch) %4 - if set, don't reconstruct import tables %5 - set the path to the signatures file with hashes (default is set to "signature") * When using a clean hash database, a generic signature will only match the processes that have already been analyzed. * Processes that have already been analyzed will not be analyzed again, and the hashes will not be compared to the ones in the database. * If no clean hash database is used, the signatures file will be skipped, and all processes will be scanned. * Hashes can be found in the shared signature database: Another popular option for reverse engineering apps is 0x0Pedia. While it doesn't offer the variety of functionality that DumpBin can, it's a free option that comes highly recommended by a lot of people. A: You can try arp-scan - In recent years, in order to further increase the capacity of a battery pack in a mobile telephone device and the like, the number of battery cells which are connected in series in a battery pack has been increased. As the number of battery cells which are connected in series in a battery pack increases, the number of battery cells which are short-circuited increases. Therefore, it is important to detect a short-circuit in battery cells. As a method for detecting a short-circuit in battery cells, a method for detecting a short-circuit in battery cells by counting a plurality of turned on and turned off signal lines is conceivable. In the method, a counter is activated every time a signal line is turned on or off, and a short-circuit state is detected by counting the number of times of activation of the counter. However, in the method for detecting a short-circuit in battery cells by counting the number of times of activation of the counter, when a plurality of battery cells are short-circuited, it is not possible to detect the
