ITV to move central London HQ to Battersea Power Station

ITV has applied to change its headquarters from central London to Battersea Power Station. ITV is to move its headquarters from London's Cannon Street to the site of the failed Thames Tidal Energy scheme at Battersea Power Station. The landmark decision to relocate ITV's headquarters was taken at a meeting of the broadcaster's board of directors on Tuesday morning. It will result in a massive financial saving for the company, with the total saving projected to be around £60m. A company statement said: "Over the last few months, the board has held a number of meetings with senior executives and advisors to discuss the future of ITV, including its future home. Following the most extensive period of stakeholder consultation the board is today giving the green light for ITV to apply for planning permission to move the company to Battersea Power Station. The board is confident that a new headquarters for ITV is in the best interests of the business, the programme makers, the audiences and the staff." ITV's existing headquarters on the Waterloo Road are being sold by CGTB Holdings, a consortium of fund managers including JP Morgan, Cinven and Cerberus Capital Management, to raise money for the planned relocation. The first phase of the sale process is expected to be complete by the end of the year, with Battersea Power Station itself expected to be sold in the second half of 2018. The move will initially involve the relocation of ITV's executive team and the move of a few hundred of ITV's 2,000 employees to Battersea. CGTB Holdings has already applied for planning permission for the move to Battersea, and will hold a meeting with local residents in early 2018.

The effect of metoprolol and atenolol on plasma triglyceride levels in type 2 diabetes mellitus. Type 2 diabetes mellitus is an independent risk factor for atherosclerosis, which may be due to the increased triglyceride levels associated with this disorder. Both beta-adrenergic receptor blockers and statins are known to decrease plasma triglyceride levels. This study compares the effect of the beta-adrenergic receptor blockers metoprolol and atenolol on plasma triglyceride levels in type 2 diabetes mellitus. Thirty-four type 2 diabetic patients
