[Source: <http://stp.cs.cmu.edu/stp/index.html> Boundary Elements

Boundary elements, aka boundary values, are a function of three or more variables which determine the boundary values, such as thickness, width, time, and many others. In this article, we will describe only the most basic boundary elements. In other articles we will see more boundary functions. The figure below shows several examples of different boundary elements. Each element defines a specific part of the function graph. So if you want to graph a function, you can use these boundary elements as a starting point. If you want them to be in the same drawing, you can combine them into one overall drawing. In this

lesson, we're going to create a simple chart where I want the elements to be in the same drawing. First, we're going to create a new document.

Then we have to create a new layer so that all the boundary elements take their places. Step 3: Create a new layer Now we will create a new layer and call it "border elements". In this tutorial, we will be using many different elements and we need to make sure that all of them are in the same picture. To do this, we create a new layer and call it "layers".

I added a new element to the new layer, let's call it "glasses", then I created another layer and called it "helmet". For the glasses I used a very simple geometric shape. You can choose any other shape. To create the helmet, I drew a circle, then added a layer mask to hide part of the circle, and another layer to hide part of the helmet. Then I added a new element to these two layers, let's call it "wing", then I added a new layer and added a shape, let's call it "mask". The "mask" layer has three layers. I add it all to a new layer (pictured below). Then I create a new layer underneath the "mask" layer and add a shape to cover part of the mask. Then I create a new layer under the "wing" layer and add a shape to cover the wing part. Then I create a new layer and remove the shape. I move the whole shape to a new layer. Then I add a new layer, create a new item and add a shape to cover it. Now I add a new layer on the new layer.
