Download DHP-303 PowerLine HD Utility right now, and enjoy a reliable and easily managed network. It includes the DHP-303 PowerLine HD Adapter, 4 display cables and the network wizard. Simply install the adapter to the nearest electrical socket, connect the cables and connect to the Internet to start configuring the network. The 4 display cables allow you to configure the screen. They also provide a power line for the adapter, while the power jack is for your main power supply. The network wizard will guide you through the setup process. DHP-303 PowerLine HD Utility will assist you with every step of the setup process, from connecting to the service provider to creating multiple network profiles. Do you get the feeling that the Internet is getting more restrictive? What if you could have unlimited, fully uncensored access to the Internet, like you do on your regular laptop? It is possible and you don't have to be rich either - find out how in our article on DHP-303 PowerLine HD Mesh Network Starter Kit. DHP-303 PowerLine HD Mesh Network Starter Kit New User Guide If you're new to DHP-303 PowerLine HD Mesh Network Starter Kit, we've prepared a quick-start guide to help you get started as soon as possible. Getting Started Accessing the DHP-303 PowerLine HD Mesh Network Starter Kit software: You can download and run the software from the installation CD of this product. If you received a DHP-303 PowerLine HD Mesh Network Starter Kit pre-installed with a network wizard, you can download the software from the Web page of the manufacturer. After the software is successfully installed, log in to the main menu to start configuring the network. Installing the adapter The easiest way to install the DHP-303 PowerLine HD Mesh Network Starter Kit is to simply plug it into a socket and turn it on. It can even be done wirelessly, using the Bluetooth technology. After the adapter is installed, you can plug the DHP-303 PowerLine HD Mesh Network Starter Kit into any of its input jacks and connect it to your home network. A screen on the adapter will prompt you to connect to the Internet. After connecting, you can log in to the network wizard by pressing the Start button. Network Setup Wizard The network wizard will guide you through the following steps: Select an

It's time to get started! This starter kit will allow you to setup the new PowerLine Net Access Units at your home or office in less than ten minutes. This includes doing such things as making your router your internet gateway to the Internet, setting up your computers on the network and configuring them to access the Internet at the same time as access to your main computer at home or office. Kits are shipped with everything you'll need including adapters, coaxial cables (5ft each), and a manual. A: Am so glad I stumbled across this thread. I bought one of these units from Ebay a month ago, and I did the setup for 2 computers exactly as stated in the manual, and it did work. Although I discovered that most of the modem controls are completely undocumented; you have to enter them using trial and error (slow process). Anyways, it worked, and I just wanted to let you know that you can indeed setup a working network using these devices, and I now have 2 PCs connected to a VPN wireless network. Just wanted to offer a little back story: I was searching for a business to buy a desktop computer from, and I stumbled across this product on ebay. A couple days after I bought it, I noticed that a new one popped up on the market, from which I bought it, thinking I was getting a brand new, never been used, desktop. I was happy, until I tried to boot it up and it wouldn't boot up at all, so I went and bought another one, same problem. I was thinking it was a bad batch of parts, but after rebooting one machine, it started up fine. There was no way that I was going to spend so much money when I didn't have to. I then turned on my other computer, and there was no adapter on the network. I called the help center and they told me that it was just that it needed to be plugged in to a power outlet, so I assumed it was a bad router. I unplugged it, and plugged it back in, and it worked. I had the manual; I just couldn't figure out the modem controls. Fortunately I had a very helpful tech support guy on the help line, and he told me that the modem control settings were completely undocumented, and that basically any combination of settings would work. That was over 2 months ago now, and I haven't tried setting it up again, because I know that you can 6a5afdab4c

This multipurpose software is designed to work with DHP-303 PowerLine HD Adapter and all DHP-303 PowerLine HD and DHP-303x PowerLine HD Ready device.
