Download FlexiSign Pro 2020 Not sure how to make your product stand out from the crowd and be remembered by your customers? Introducing one of the best retargeting tools with which you can set up effective advertising as well as create creatives for social networks. BoostRAP is a free tool for creating landing pages using HTML and JavaScript. In this article we will show you how to create a website using HTML and JavaScript and provide download links for all the necessary resources. What is BoostRAP? BoostRAP is a free tool for creating webpages with HTML and JavaScript that allows you to create your own pages. With the help of BoostRAP you can create your own unique design of creating branding pages (sales/subscription pages) and customize the pages with a lot of visual elements and plugins. In this article we will look at creating a website based on HTML, which will allow you to create a template for a landing page using JavaScript. How does BoostRAP work? BoostRAP is a website management system based on JavaScript. BoostRAP allows you to create templates for your landing pages that will be automatically generated from the contents of the pages. BoostRAP creates a script which, by default, contains only the HTML code necessary to display the page. The script recognizes and parses the content depending on what the user wants to see. For example, if the user only wants to see text, the script includes text in the template. By default, the script parses the page content in the browser and displays it on the page depending on what the browser can show. The script parses the content depending on what the user wants to see. By default, the script parses the page content in the browser and displays it on the page, depending on what the browser can show. Example of using the script Create a form on the page, specify the client's email and click send. Then the script displays the form and automatically sends the information to chat (if you have configured it). Use this option to send the form that is on the page. To use this feature, you need to create a form and specify email in it. Example form After the submit button is clicked, the script does not show the form, but automatically sends it to chat.
