As is well known in the art, small diameter blood vessels such as arteries and veins may be occluded by emboli or atherosclerotic plaque. If the occlusion is in a coronary artery, it can result in myocardial infarction or unstable angina. If the occlusion is in the cerebral arteries, it can lead to a stroke. To prevent this, emboli may be removed before they cause

such damage. In addition, it is sometimes desirable to occlude a blood vessel to slow or stop blood flow through the vessel. During angioplasty, atherectomy, endarterectomy or stenting procedures a physician may advance a catheter or other device into a patient's vasculature to perform a therapeutic function, such as engage or sever atheroma from a blood vessel wall, ablate the atheroma or transport a

device or a therapeutic element to a location within the patient's body. Such procedures may be generally referred to as interventional procedures. Further, during such procedures, biopsy or other removal of tissue material may be performed to remove a sample of tissue material. Such procedures may be generally referred to as diagnostic procedures. For interventional or
