That's what I want to find: the two lines after
'nddnw56englishsoftwaredownload. The reason why I am doing
this is to find if the line contains:
nddnw56englishsoftwaredownload. The reason why I am not doing
this is because I have a long string, and I don't want to have it split
and modified. So, I would really appreciate if someone could
suggest a way of doing this. A: You can use endswith and lambda
in python: >>> string = ""nddnw56englishsoftwaredownload. >
