For this reason, iVast Company offers its clients the best solutions to ensure safe and sound internet security. What is the key difference between a free virus scanner and a full-featured virus scanner? Let's find out. Free virus scanner Compared to a full-featured anti-virus (A/V) program, the free version provides incomplete protection. That means, while it can detect the majority of viruses, the chance is that it misses some, which is why you will get at least occasional alarms about the presence of viruses and similar threats. The free version of an A/V program is also limited in the number of features you can use – some free virus scanners restrict you to advanced protection settings, so that you cannot easily modify your detection settings. Many virus scanners are free to use. But do not necessarily mean that the program can detect all viruses. A/V program These are the basic features of an A/V program:
