Calculators have come a long way since their humble beginnings. It wasn't that long ago that calculators were basic and didn't provide you with much in terms of

convenience and functionality. But now, modern calculators come with dozens of different features. From multifunctional graphing calculators to compasses, from scientific calculators to feature rich spreadsheets, there are a vast variety of dedicated tools on the market today. While we generally prefer to use modern computing technology, it's sometimes necessary to go back in time and use the traditional calculator. However, this comes with some drawbacks such as the need to carry a bulky, heavy and expensive piece of equipment with you everywhere. But a modern and portable calculator has now come along and changes all that. CalcWriter is a Windows application that takes the modern calculator experience to the next level. Designed to operate like a modern tool, CalcWriter is a stand alone application. However, unlike other modern calculators, it works in conjunction with the operating system's calculator, rather than as an alternative. By combining this modern technology with the ability to work in a portable format, CalcWriter provides users with the best of both worlds. Interface The CalcWriter interface is simple and intuitive. It works like a modern calculator, with a well laid out design that makes it easy to carry out simple operations. However, it also supports a tab based interface which makes it easier to input formulas. While you can use this application for basic operations, it has a

few advanced features that aren't available in modern operating systems. This includes functions such as reverse, log, trig, and fraction. The tab interface allows you to input values in the following units: • Feet • Inches • Centimeters • MM • Inch • Millimeters • Cubic • Pounds • Kilograms • Celsius • Fahrenheit • Newton • Strings • Exponential • Logarithmic • Statistics • Quadratic • Stochastic

CalcWriter Features CalcWriter is a stand alone calculator application. However, unlike a traditional calculator, it uses the built in calculator of Windows. • A comprehensive feature list of every mathematical function that Windows' calculator supports. • Tab based interface 1d6a3396d6
