7 July 2564 BE - IEC
61936-1:2021 provides
requirements for the design and
installation of electric power
installations in rated voltage
systems. \hat{U} is the rated voltage
of the network (kV); N_p -
nominal voltage losses in the
network; \hat{U} is the network

voltage loss factor at unbalanced load; $\hat{\gamma}_{Upr}$ " line voltage loss coefficient at unbalanced load; U is the rated voltage of the installation (kV); U_n - rated voltage of the line (kV); N_p - rated voltage losses in the installation (kV). According to GOST 28779-90, voltage losses in the line should not exceed $\hat{\gamma}_{U} = 6\%$, and voltage losses in the installation should not exceed $\hat{\gamma}_{Upr} = 8\%$.
