Category: Inclusive Technology Tools: Writing, see more collections of Inclusive Technology Tools: Writing.Q: Visual Studio 2012 Warning CS1028 Invalid literal expression I am using VS2012 to create custom controls, for that, I need to create a class that inherits from the base and must include a property named 'Tag'. So I have the following in my custom control class' default constructor protected override void Initialize() { base.Initialize(); Tag = "test"; } and I am getting a warning CS1028: Invalid literal expression for the code 'Tag = "test"; Is it because I am trying to access the Tag property from the base class before assigning the value to it? Can someone please help? A: You've had a typo in your code. The property Tag of the control should be Tag and not Tag = "test"; (Note the missing capital T). Edit: also as other people have mentioned, to make sure the value is assigned, you need to initialize the control property like this: public ControlBase() { Tag = "test"; } A: You're accessing a property on the base class before assigning a value to it. The code is telling you exactly what it is, and how you

---

must fix it. That is invalid literal expression for the code "Tag = "test"; You must declare a property named Tag in the derived class. A: It is because you have a typo in your code. Tag instead of Tag = "test" Q: Implementing a general class to create streams of elements (operators) I have a problem which would be easier to understand with an example: Assume you have a user with a stream of elements e, and you want to know the stream of all the subsequences of this stream. You can do this using the regular sequence 570a42141b
