
Data Generator For Oracle Crack + [Updated]

Generate database information for your Oracle database through a wizard-driven application. You can customize the UI to your needs, and even change some elements within the application during the data generation process. This tool is pretty easy to use, and is not very difficult to grasp, so you can definitely use it. Whether you're a beginner or an advanced user, Data Generator for Oracle will meet your needs. It is intuitive and easy to use, but it does not impose itself on your system. As you can see, the application allows you to choose a number of inputs, such as user-defined text, lists, and ranges, and it will automatically generate all the needed information for you. Additionally, the program can generate result sets of different SQL queries. These results can be edited or changed in an intuitive way, for example, by editing their titles or previewing them. In the next step, the user can choose which SQL query to generate. Data Generator for Oracle can execute queries as: SELECT, INSERT, UPDATE, DELETE, CREATE, ALTER, DROP, and TRUNCATE. The user can also choose if he wants to include or exclude columns, and the source of data for these columns. When performing the data generation process, you can either create multiple records for each input, or just one for each. You can define up to 99 fields per record, and you can choose the number of rows you want to generate from the created records. The values that the user gives for each field are not limited, and you can define any text for the fields, as well as any type of data. You can also generate the data for multiple fields at the same time, with any number of records. All your generated data is saved as a single file. You can save a preset configuration for this file, or load a previously generated file. Data Generator for Oracle comes with preset configurations for Oracle 9.2 through 11.2, in both SQL and PL/SQL formats. You can also save a customized version of a file. It is also possible to export the generated data in a comma-separated value (CSV) file, or in Excel, Microsoft Word, or any other text-based format. The tool is fully compatible with Oracle databases up to 11.2.0, and it can be used as a standalone application. The application comes with a wide

What's New In Data Generator For Oracle?

Data Generator for Oracle is a small application that can add extra functionality to your database administration system, as it is suitable for generating database information. The application works with Oracle server systems up to 11.1.0 only; this could be a small inconvenience if you require a tool that supports newer Oracle versions. However, for those who don't mind this limitation, the program can be extremely useful, as it offers a wide range of options. Regarding the actual data generation process, you first need to connect to an already installed and configured Oracle host, from within Data Generator for Oracle's main interface. After establishing a local or remote connection, you can go through the app's step-by-step wizard, and proceed with the data generation. This tool can help you define tables and multiple fields, custom Oracle char entries, user-defined range values, lists, and more. At the same time, you can also populate fields with NULL values, preview your content, save all the configuration parameters in a separate file, create templates, or manipulate SQL query results for generating new pieces of information. Regarding the tool's GUI and menu, you can expect this app to be nice, user-friendly, intuitive, and pretty customizable. The user can change GUI elements, adjust fonts and colors, and, during the data generation process, configure inputs, outputs, and everything else in-between. Data Generator for Oracle Description: Data Generator for Oracle is a small application that can add extra functionality to your database administration system, as it is suitable for generating database information.
