Author: VSTi PluginQ: Saving multiple input values into object I'm working on a JS object that saves the input data for a form into an object. I don't know how to name the ID's so I started with a name I found on a tutorial. `var myObject = { };`
`$("#form").on('submit', function(event) { event.preventDefault(); var name = $('#name').val(); var number = $('#number').val(); myObject.Name = name; myObject.Number = number; });` So if I want to use the object outside the form I use: `alert(myObject.Name);` Is there a better way to name my ID's and save the data into the object? A: It looks like you're expecting the submit button to be the form element. In that case: `$("#form").on('submit', function(event) { event.preventDefault(); var name = $('#name').val(); var number = $('#number`
