KwikTrig

KwikTrig is a trigonometry and geometry calculation program for Windows. The program has been designed to be used in a personal computer, but can also be used on a laptop if you use a large touch-screen display, and can also be used on a PC if you have a small touch-screen display. The program is very easy to use with a touch-screen display. The calculation engine in KwikTrig is capable of converting degrees, minutes, and seconds into minutes and seconds or degrees, minutes, seconds and frames of the arc. The conversion is true whether the input is inches, miles, or millimeters, and you don't need to have a metric system conversion table. Some people may know the program as the tool with which they calculated cubics, shapes, dimensions, etc, but many people may not have used the program themselves, and still don't know about the program. Features: - Using the advanced calculation engine, you can convert angles, lengths, miles to millimeters, and millimeters to inches, feet, inches, etc. - Using the advanced calculation engine, you can convert angles, lengths, miles to millimeters, and millimeters to inches, feet, inches, etc. - Conversion of length units (feet, inches, millimeters, and so on) - The program has a special function that allows you to calculate all the KwikTrig Form The KwikTrig form is the output of a formula that you create in the program. The form can be used in any report. KwikTrig reports The KwikTrig reports are the results of a geometry question. The report will show the geometry entity, the angle, the answer, the method used to find the answer, and the conversion factor. Tips: You can press the space bar on your keyboard to select the report, and you can press CTRL+D to delete the report. You can also double-click on the report to open it in another window. KwikTrig runs in the Windows XP or Windows 7 environment.
